GNANI AI INTERNSHIP CHALLENGE 2026 / SOLUTION PITCH

Local help, in your words.

THE IDEA

EchoLang is built for India's tier-2 and tier-3 cities and towns. Search uses basic phone actions: choose a language, speak a need and place, confirm it, and hear local matches.

USER IMPACT

FOR SEEKERS

Speak in familiar words. Confirm the service and city. See and hear local matches without learning search terms.

FOR WORKERS

Answer short voice or text prompts. Review the listing. Edit, pause, or delete it when details change.

FROM REQUEST TO RESULT

INPUT — Voice (Prisma) or text → **UNDERSTAND** — GPT-OSS 120B → **CONFIRM** — Service and city → **MATCH** — FastAPI and SQLite → **REPLY** — UI and Timbre

TECHNICAL DESIGN

SPEECH + REASONING

Gnani Prisma v3.0 transcribes voice. GPT-OSS 120B extracts the service and city. Gnani Timbre v3.0 speaks prompts and results.

APP + DIRECTORY

React and TypeScript run the UI. FastAPI manages the flow and ranks SQLite listings. Text input works without a microphone.

DEMO SCOPE

10	6	6	6
LANGUAGES	CITIES	SERVICE TYPES	SAMPLE LISTINGS

All sample providers are fictional. Call buttons are disabled. Try fan repair in Udaipur.

NEXT STEP

A small pilot with people who have limited digital experience will test search completion, match relevance, and listing accuracy.
